1 Resource sharing for book-ahead and instantaneous-request calls
   Albert G. Greenberg, R. Srikant, Ward Whitt
   February 1999 IEEE/ACM Transactions on Networking (TON), Volume 7
                    Issue 1
   Publisher: IEEE Press
   Full text available: 🔧 pdf(346.03 KB)   Additional Information: full citation, references, cited by,
                                                                 index terms

      Keywords: advance reservation, book-ahead calls, integrated services
      networks, link partitioning, loss networks, quality of service, video
      teleconferencing

2 Time-critical information services
◈ Thomas A. Horan, Benjamin L. Schooley
   March 2007 Communications of the ACM, Volume 50 Issue 3
   Publisher: ACM
                                          Additional Information: full citation,
                                                                  abstract,
   Full text available: 🔧 pdf(148.93 KB) 🔧 html(32.36 KB)   references,
                                                                  index terms

      Emergency medical services have never been more ready for the
      implementation of time-critical interorganizational information services for
      the public good.

3 Supporting time-based coordination in everyday service interactions:
◈ the fluidtime system
   Michael Kieslinger, Laura Polazzi
   August 2004 DIS '04: Proceedings of the 5th conference on Designing
                    interactive systems: processes, practices, methods, and
                    techniques
   Publisher: ACM
   Full text available: 🔧 pdf(308.06 KB)   Additional Information: full citation, abstract, references,
                                                                 index terms

      The need for flexible and dynamic time management is becoming
      increasingly crucial in our society, especially where it concerns the
      coordination between individual and organizational time flows. The HCI
      community's prevailing approach to this issue focuses ...

      Keywords: flexibility, mobile interactions, real-time, scheduling, time,
      ubiquitous computing, wireless
